(54) DOCUMENT REFERENCE CONTROL METHOD

(57)Abstract:

PROBLEM TO BE SOLVED: To perform reference control of one part of a document without modifying an existing document by suppressing the display of an item content when a reference destination includes the identifier of a document and a referring person which are set in a reference control table.

SOLUTION: A person who refers designates a reference control program name as a reference destination URL, checks the identifier of the person who refers with the identifier of a document to be referred to as a start parameter of a program and designates it. For instance, when a person B having the identifier 'SUZUKI' who refers shows a document 'introduction of the general affairs department' which has an identifier 'SOUMU', a document 4020 which eliminates information of 'intra-department event schedule' is shown to the person B, and a document 4030 which replaces the information of the 'intra-department event schedule' with 'Please refer to a person in charge' is shown to a person C who refers. Further, when reference control is set even about a document where a URL is described and which specifies 'to the account section', the URL is replaced with a reference control program.
